Drukken

PN : PN is de nominale druk en is een standaard getal voor druk

PB : PB is de toelaatbare werkdruk voor een koppeling. Deze is afhankelijk van het materiaal in combinatie met de toelaatbare bedrijfstemperatuur (TB) bij een storingsvrije werking.

Toelaatbare bedrijfstemperatuur

Type	Materiaal	Bedrijfstemperatuur
Koppeling	RVS 1.4571 (316Ti)	-60°C tot + 400°C
Afdichting	NBR	-35°C tot + 100°C
	FPM* (Viton)	-25°C tot + 200°C
	PTFE	-60°C tot + 200°C
	POM	-40°C tot + 200°C

* = standaard afdichtring van de in de catalogus opgenomen koppelingen (code 'ED' in de type codering)

Let op! Bij een combinatie van een rvs snijringkoppeling met een afdichtingsmateriaal is de laagste toelaatbare bedrijfstemperatuur van toepassing.

Een rvs snijringkoppeling zonder afdichting heeft een maximaal toelaatbare bedrijfstemperatuur van +400°C. Dezelfde koppeling voorzien van een ED afdichting heeft een maximaal toelaatbare temperatuur van +200°C.

Drukvermindering

De toelaatbare werkdruk van de rvs snijringkoppelingen is afhankelijk van het temperatuurbereik.

Temperatuurbereik	Drukvermindering
-60°C tot +20°C	-
+50°C	5%
+100°C	11%
+200°C	20%
+300°C	29%
+400°C	33%
tussenliggende waarden interpoleren	

Indien het pijpmateriaal afwijkt van het materiaal van de koppeling controleer dan de pijp op het toegestane temperatuurbereik en de eventuele drukvermindering.

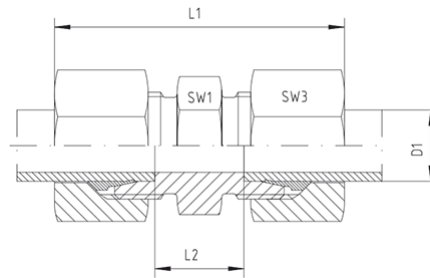

Belangrijk!

De aanduiding 'OMD' in de codering betekent een koppeling zonder moer en snijring.
